EDUCATION

- Poornima College of Engineering** Jaipur, Rajasthan
B.Tech in Computer Science (Cyber Security); CGPA: 7.7 2022 – 2026

TECHNICAL SKILLS

- Languages:** C++, Python, JavaScript, SQL
- Core CS:** Data Structures, Algorithms, OOP, OS, DBMS, Computer Networks
- Web & Systems:** React.js, Node.js, Express.js, Socket.io, Distributed Systems
- Databases:** PostgreSQL, MongoDB, Redis
- Tools & Technologies:** Docker, Git, GitHub, Celery, Scrapy

EXPERIENCE

- MediaAmp** *June 2025 – January 2026*
Software Developer Intern
 - Designed and scaled distributed web crawling pipelines using **Scrapy**, **Playwright**, **Celery**, and **Redis**, processing **100K+ URLs/day** under anti-bot constraints.
 - Built fault-tolerant, queue-based systems with retry and proxy rotation strategies, improving crawl stability and accuracy by **25%**.
 - Developed monitoring dashboards (Looker Studio) to track system health, failures, and performance across multi-stage pipelines.
 - Achieved **99% SLA adherence** for time-sensitive data updates through proactive failure detection and automated recovery workflows.
 - Optimized distributed task execution and resource utilization in a multi-worker environment orchestrated via **Airflow**.

PROJECTS

- DocuFlow** | [GitHub](#) | [Live Demo](#)
 - Built an asynchronous document processing system using **React (TypeScript)** and **FastAPI**.
 - Designed a queue-based architecture with **Celery** and **Redis** to handle background jobs and improve API responsiveness.
 - Implemented a multi-stage processing lifecycle with robust status tracking and fault-tolerant workflows.
 - Used **PostgreSQL (Supabase)** to store document metadata and processed outputs.
- StreamChat** | [GitHub](#) | [Live Demo](#)
 - Built a real-time messaging system using **React**, **Node.js** and **Socket.io** supporting concurrent users with low-latency communication.
 - Achieved **35 req/s** with **0% failure rate** under **100 concurrent users**; performed load testing using **k6** to analyze latency scaling and system behavior under stress.
 - Integrated **Redis caching** for low-latency message retrieval and utilized **Brevo** for secure **OTP-based email verification** during user onboarding.
 - Designed secure **JWT-based authentication** and managed efficient global state via **Zustand**.
- GameFinder** | [GitHub](#) | [Live Demo](#)
 - Developed a responsive React application with advanced filtering and search using Redux Toolkit.
 - Configured **CI/CD pipelines via GitHub Actions** to automate **Docker** image builds and deployment.
 - Integrated Clerk for seamless user authentication and data persistence via localStorage.

ACHIEVEMENTS

- Data Structures & Algorithms:** Solved 400+ problems across [LeetCode](#), [GFG](#), and [Code360](#).
- LeetCode Rating:** 1500+
- Hackathon Finalist – HackIt Sapiens:** Selected among shortlisted teams in a college-hosted hackathon with nationwide participation.
